Joint Certification

Joint Certification of the Metropolitan Planning Process for the Houma-Thibodaux Urbanized Area

The State of Louisiana and the Houma-Thibodaux Metropolitan Planning Organization hereby certify that the transportation planning process is addressing the major issues facing the Houma-Thibodaux Urbanized Area and is being conducted in accordance with all applicable requirements of:

23 U.S.C. 134, 49 U.S.C. 5303

Title VI of the Civil Rights Act of 1964, as amended (42 U.S.C. 2000d-1) and 49 CFR part 21;

49 U.S.C. 5332, prohibiting discrimination on the basis of race, color, creed, national origin, sex, or age in employment or business opportunity;

Section 1101(b) of the MAP-21 and 49 CFR part 26 regarding the involvement of disadvantaged business enterprises in USDOT funded projects;

23 CFR part 230, regarding the implementation of an equal employment opportunity program on Federal and Federal-aid highway construction contracts;

The provisions of the Americans with Disabilities Act of 1990 (42 U.S.C. 12101 et seq.) and 49 CFR parts 27, 37, and 38;

The Older Americans Act, as amended (42 U.S.C. 6101), prohibiting discrimination on the basis of age in programs or activities receiving Federal financial assistance;

Section 324 of title 23 U.S.C. regarding the prohibition of discrimination based on gender; and

Section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794) and 49 CFR part 27 regarding discrimination against individuals with disabilities.

Louisiana Department of Transportation & Development

Mr. Dirk Guidry, Chairman
Houma-Thibodaux Metropolitan Planning Organization

April 27, 2017

DRAFT

HTMPO Committees

The Houma-Thibodaux Metropolitan Planning Organization (MPO) is a consortium of governments responsible, in cooperation with the State, for the transportation planning process for the Houma-Thibodaux Urbanized Area. The MPO is comprised of two committees: the Policy Committee (PC), and the Technical Advisory Committee (TAC). The Policy Committee is the official decision making body, and the TAC advises the Policy Committee on technical matters of projects, plans, and programs.

Policy Committee:

The Policy Committee serves as the official decision making body for the MPO. The Policy Committee oversees how federal transportation dollars are spent in the transportation study area as shown in **Map 1**. The Policy Committee's responsibilities include the review and approval of all plans, programs, and projects. It is comprised of elected officials from region within the MPO's study area.

The Policy Committee is composed of twelve voting members and one non-voting member.

Voting Members:

- Mr. Dirk Guidry, MPO Policy Committee Chairman – TPCG, Council member
- Mr. Tommy Eschette, MPO Vice Chair – City of Thibodaux, Mayor
- Mr. Ron Animashaun – Village of Napoleonville, Mayor
- Mr. James Cantrelle – Lafourche Parish, Parish President
- Mr. Paul Champagne – Town of Lockport, Mayor
- Mr. Gordon Dove – TPCG, Parish President
- Ms. Christa Duplantis-Prather, TPCG, Council member
- Mr. Al Marmande – TPCG, Council member
- Mr. Chris Morvant – LA Dept. and Transportation & Development, District 02 Administrator
- Ms. Luci Sposito – Lafourche Parish, Council Member
- Mr. Martin Triche, - Assumption Parish, Police Jury President
- Ms. Arlanda Williams – TPCG, Council member

Non-Voting Member:

- Mr. Brandon Buckner (non-voting member) – FHWA, Transportation Planner

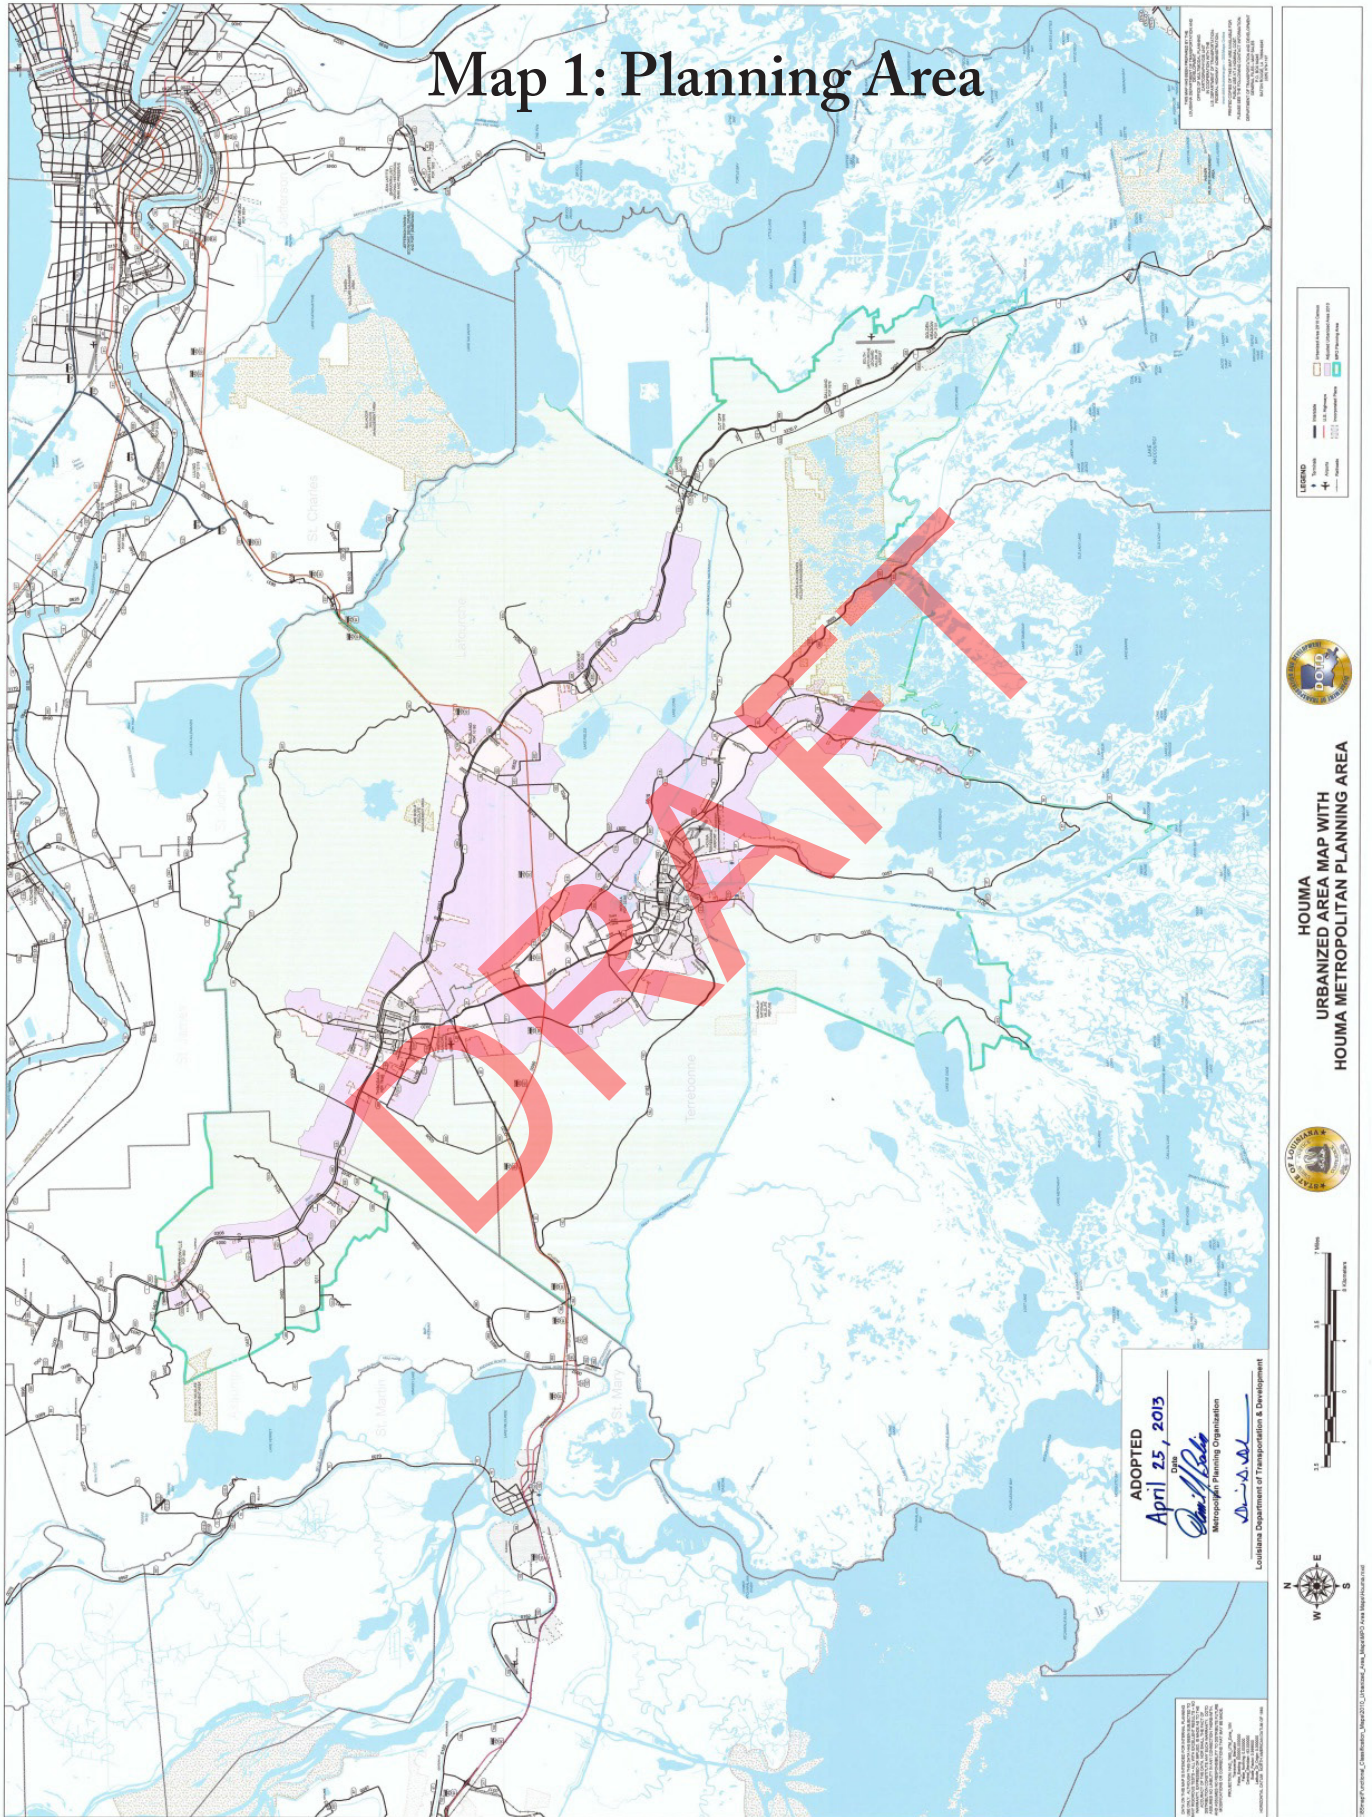

Technical Advisory Committee:

The Technical Advisory Committee reviews plans, programs, projects, studies, and reports and provides the Policy Committee with recommendations concerning them. The TAC is represented by all agencies involved in the transportation planning process. Participants on the TAC include municipalities, parishes, the Louisiana Department of Transportation and Development, the Federal Highway and Transit Administration and other selected transportation interests.

Members:

- Assumption Parish, Parish Manager / Public Works Director
- City of Thibodaux, Grants Director
- City of Thibodaux, Public Works Director
- Federal Highway Administration
- LADOTD, Area Engineer, Dist. 61
- LADOTD, Maintenance Engineer, Dist. 02
- LADOTD, Office of Planning and Programming
- LADOTD, Public Transportation Administrator
- LADOTD, Traffic Engineer, Dist. 02
- Lafourche Parish, Chamber of Commerce
- Lafourche Parish, Grants Director
- Lafourche Parish, Planning Department
- Lafourche Parish, Public Works Director
- Terrebonne Economic Development Authority
- Terrebonne Parish, Chamber of Commerce
- Terrebonne Parish, Engineering Department
- Terrebonne Parish, Planning & Zoning Director
- Terrebonne Parish, Public Transit Manager
- Terrebonne Parish, Public Works Director
- Terrebonne Parish, Roads and Bridges Division, Operations Manager
- Town of Lockport, Mayor

Map 1: Planning Area

Introduction to Metropolitan Transportation Planning

Metropolitan Planning Organization

MPOs, or Metropolitan Planning Organizations, are organizations designated by the federal government to be responsible for long-term urban transportation planning efforts. In other words, eligibility to spend federal money on transportation projects in certain local municipalities depends upon a functioning MPO. MPOs may be formed in areas with a population of at least 50,000 and meeting the minimum population density as defined by the Bureau of Census. They are created by an agreement between the Governor and local governments representing at least 75% of the population in an urban area. Typically, they are a consortium of governments and other bodies, such as transit agencies and citizen groups working together to carry out a cooperative, comprehensive, and continuous metropolitan transportation planning process.

The Transportation Planning Objective

The Federal-Aid Highway Act of 1962 was the first piece of federal legislation to **mandate urban transportation planning** as a condition for receiving federal funds in metropolitan areas. The act stated:

“It is in the national interest to encourage and promote the development of transportation systems embracing various modes of transportation in a manner which will efficiently maximize mobility of people and goods within and throughout urbanized areas and minimize transportation related fuel consumption and air pollution.”

There are two significant features of the act. First, the act called for a planning process in urban areas rather than cities, setting the scale at the **regional level**. Second, the act called for the planning process to be conducted **cooperatively** with state and local communities.

Since that time, the other various federal transportation bills, such as the Intermodal Surface Transportation Efficiency Act (ISTEA), the Transportation Equity Act of the 21st Century (TEA-21), the Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users (SAFETEA-LU), the Moving Ahead for Progress in the 21st Century Act (MAP-21), and the Fixing America’s Surface Transportation Act (FAST Act) have continued to expand and better define the transportation planning process.

Products of the Transportation Planning Process

The key role of the MPO is the creation of the **Metropolitan Transportation Plan (MTP)**, a long-range planning document, and the creation of the **Transportation Improvement Program (TIP)**, a project programming document.

The Houma-Thibodaux Metropolitan Transportation Plan

The current Houma-Thibodaux Metropolitan Transportation

Plan was adopted in 2015. The purpose of that plan is to develop both long-range and short-range strategies that lead to the development of an integrated, intermodal transportation system. That system, in turn, facilitates the efficient movement of people and goods.

The principle result of the plan is a **prioritized list of improvements** divided into **three stages of implementation**. The first stage of projects forms the basis for the development of the Transportation Improvement Program.

The MTP must be multimodal, maintain a 20 year planning horizon, and be updated every five years. In addition, the plan must be fiscally constrained, including only those projects for which funding can be expected from reasonable estimated sources.

Purpose of the Transportation Improvement Program

The Transportation Improvement Program

The TIP is a staged, multiyear program of projects proposed for funding by federal, state, and local sources within the Houma-Thibodaux Metropolitan Area. The TIP is developed by the Houma-Thibodaux Metropolitan Planning Organization in cooperation with Terrebonne Parish Consolidated Government, the City of Thibodaux, Lafourche Parish and the Louisiana Department of Transportation and Development in accordance with the metropolitan planning requirements set forth in the federal highway spending bill, the *Fixing America’s Surface Transportation (FAST) Act*.

The TIP identifies roadway and transit projects programmed for construction within the next four years that implement the goals and objectives identified in the Houma-Thibodaux Metropolitan Area Transportation Plan.

The TIP, as well as the MPO’s other planning products, are guided by a set of seven **national goals**, fifteen **regional goals**, and ten national *planning factors*. These goals and planning factors guide the various strategies, policies, and projects undertaken by the MPO. These goals and factors are listed on page 7 of this document.

TIP Objectives

The TIP for the Houma-Thibodaux Metropolitan Area was developed with the following local objectives:

- To identify transportation improvement projects as a result of a comprehensive, cooperative, and continuing regional transportation planning process.
- To identify the priorities by the Houma-Thibodaux Metropolitan Planning Organization, local governments and public transportation providers for transportation improvements.
- To use realistic, current estimates of costs for transportation improvement projects, balanced by reasonable estimates of available revenues.
- To demonstrate that energy, air quality, cost and mobility considerations are addressed in regional transportation planning and programming of projects.

National Planning Goals

- Safety:** To achieve a significant reduction in traffic fatalities and serious injuries on all public roads.
- Infrastructure Condition:** To maintain the highway infrastructure asset system in a state of good repair.
- Congestion Reduction:** To achieve a significant reduction in congestion on the National Highway System.
- System Reliability:** To improve the efficiency of the surface transportation system.
- Freight Movement and Economic Vitality:** To improve the national freight network, strengthen the ability of rural communities to access national and international trade markets and support regional economic development.
- Environmental Sustainability:** To enhance the performance of the transportation system while protecting and enhancing the natural environment.
- Reduce Project Delivery Delays:** To reduce project costs, promote jobs and the economy and expedite the movement of people and goods by accelerating project completion through eliminating delays in the project development and delivery process, including reducing regulatory burdens and improving agencies' work practices.

Regional Goals Adopted in 2040 MTP

- Goal 1:** To maintain the infrastructure system in a state of good repair.
- Goal 2:** To improve the efficiency of the surface transportation system.
- Goal 3:** To achieve a significant reduction in congestion on the region's roadways.
- Goal 4:** To promote the use of bicycle and pedestrian facilities.
- Goal 5:** To improve safety for pedestrian and bicycle users.
- Goal 6:** To improve access for pedestrian and bicycle users.
- Goal 7:** To improve access to the region's transit network.
- Goal 8:** To improve the efficiency of the region's transit network.
- Goal 9:** To increase the coverage of the region's transit network.
- Goal 10:** To increase the ridership of the region's transit system.
- Goal 11:** To achieve a significant reduction in traffic fatalities and serious injuries on all public roads, as specified in the South Central Regional Highway Safety Plan.
- Goal 12:** To increase the security of the transportation system for motorized and non-motorized users by collaborating with various stakeholders, such as Emergency Preparedness, Homeland Security, EMS, DOTD, parish officials, transit providers, and law enforcement. The goal is to ensure consistency among emergency relief and disaster preparedness plans and strategies and policies that support homeland security (including awareness and response to potential terrorist activity, natural disasters, roadway incidents and closures, and environmental, technological and radiological hazards) and safeguard the personal security of all motorized and non-motorized users.
- Goal 13:** To enhance the performance of the transportation system while protecting and enhancing the natural environment.
- Goal 14:** To improve the region's freight network, strengthen the ability of the region to access national and international trade markets, and support local economic development.
- Goal 15:** To identify creative and alternative methods of funding local projects.

National Planning Factors

- Support the economic vitality of the United States, the States, and metropolitan areas, especially by enabling global competitiveness, productivity, and efficiency.
- Increase the safety of the transportation system for motorized and non-motorized users.
- Increase the security of the transportation system for motorized and non-motorized users.
- Increase the accessibility and mobility of people and for freight.
- Protect and enhance the environment, promote energy conservation, improve the quality of life, and promote consistency between transportation improvements and State and local planned growth and economic development patterns.
- Enhance the integration and connectivity of the transportation system, across and between modes throughout the State, for people and freight.
- Promote efficient system management and operation.
- Emphasize the preservation of the existing transportation system.
- Improve resiliency and reliability of the transportation system and reduce or mitigate stormwater impacts of surface transportation.
- Enhance travel and tourism.

Procedures to Amend or Administratively Modify the Transportation Improvement Programs

In accordance with the provisions of 23 CFR 450.216(b), the Statewide Transportation Improvement Plan (STIP) shall be developed in cooperation with the MPO designated for a metropolitan area. Each TIP shall be included, without change, in the STIP, directly or by reference, after approval of the TIP by the MPO and the Governor.

While every effort has been made to develop this document using the latest information available at the time, it is recognized that there are uncertainties in the development of projects, right-of-way acquisition, relocation of utilities, acquisition of permits, costs, funding availability, etc. Therefore, the Policy Committee has no objection to phases of projects moving within the TIP or STIP as necessitated by the situation, and gives its approval to the MPO staff to make those necessary administrative modifications without action by the Policy Committee. Staff has been directed to keep Policy Committee members informed of upcoming administrative modifications.

An **Administrative Modification** is a minor revision to a long-range statewide or metropolitan transportation plan, TIP, or STIP that includes minor changes to the project or project phase costs, minor changes to funding sources of previously-included projects, and minor changes to project or project phase initiation dates. An administrative modification is a revision that does not require public review and comment, redemonstration of fiscal constraint, or conformity determination (in nonattainment and maintenance areas).

Administrative Modification thresholds include:

- Revisions to a project description without changing the project scope or which do not conflict with the pertinent environmental document;
- Minor changes to the project scope, project phase cost applying to right-of-way acquisitions, utility relocation, engineering, or constructions. These funding changes are limited to \$600,000 for projects less than \$3,000,000 and 20% for projects greater than \$3,000,000;
- Minor changes in funding sources of previously included projects that do not effect fiscal constraint of the STIP or the ability to complete the project as initially described;
- Minor changes to the project scope, project phase initiation dates as long as the project stays within the approved TIP time frame and does not affect fiscal constraint or the ability to complete the project as initially described;
- A change in the project implementing agency;
- A split or a combination of individually listed projects; as long as cost, schedule, and scope remain unchanged;
- The addition or deletion of projects from grouped project (line item) listings as long as the line item total funding amounts stay within the above guidelines.

Each MPO approved administrative modification shall be published online separately from TIP amendments and be forwarded to LA DOTD's Transportation Planning Section and Public Transportation Section for approval on behalf of the Governor. Any instance in which a LA DOTD project affected by an administrative modification that is located within the planning boundaries of the MPO, the MPO must first generate and/or accept the administrative modification in the TIP. Once approved by the MPO, the LA DOTD, on behalf of the Governor, can incorporate the administrative modification into the STIP. LA DOTD will immediately notify the MPO, FHWA, and FTA of any approved administrative modification(s).

An **Amendment** is a revision to a long-range statewide or metropolitan plan, TIP, or STIP that involves a major change to a project, including the addition or deletion of a project or a major change in project cost, project or project phase initiation dates, or a major change in design concept or design scope. Changes to projects that are included only for informational purposes do not require an amendment. An amendment is a revision that requires public review and comment, redemonstration of fiscal constraint, and/or a conformity determination (in nonattainment and maintenance areas).

If a project affected by an amendment is located within the planning boundaries of the MPO, it must first be amended in the TIP before it can be amended in the STIP. Once approved by LA DOTD, on behalf of the Governor, the amendment will be incorporated into the STIP. LA DOTD will immediately notify the MPO, FHWA, and FTA of any approved amendment(s).

- To develop the TIP consistent with the Houma-Thibodaux Metropolitan Area Transportation Plan in accordance with guidelines established in the Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users.

TIP Requirements

Federal legislation dictates that the TIP must cover at least four years. The TIP may be updated annually, but must be updated at least every four years. The HTMPO typically updates the TIP every other year (odd numbered years).

The TIP must be financially reasonable or “constrained,” with estimates of the total cost for programmed projects balanced against the revenues reasonably expected during the TIP period. The TIP includes both federally and non-federally funded projects. Inclusion of a project in the TIP is a condition for federal funding but does not guarantee it. Non-federally funded projects are included in the TIP for informational purposes in order to provide a more comprehensive picture of how the transportation capital and operating funds are spent in the region.

The TIP must be approved by the MPO and the Governor. Once approved, the TIP becomes, without modification, part of the Statewide Transportation Improvement Program (STIP).

The Programming of Federal-Aid

Unlike most federal programs, highway funding does not depend upon the annual appropriations act for the authority to commit federal funds to a program or project. Such funding is traditionally authorized in a multi-year transportation authorization act, which establishes a maximum level of federal transportation funding per fiscal year. However, the establishment of this level of funding, which is referred to as an authorization, is only the first step in the process.

Once the authorization level has been established, the United States Department of Transportation annually allocates such funding among states based upon various federal formulas. This allocation is referred to as an apportionment. This amount, or an estimate thereof, is the basis for the development of transportation improvement programs and MPO financial plans. This is not the end of the process; however, because the annual apportionment rarely represents the actual amount of federal funds which can be committed by a state.

Typically, an amount less than the apportionment is actually available, due to the imposition of obligation authority. Obligation authority constitutes a federally imposed limitation on the spending of apportioned funds in a given fiscal year. This limitation may be imposed in a multi-year authorization act, in the annual Appropriations Act, or in both, in which case the most recent enactment controls. Obligation authority is typically less than a state’s apportionment; nevertheless, as mentioned earlier, because of scheduling requirements, a state’s apportionment is the basis for the development of TIPs.

There are two important distinctions between apportionment and obligation authority. First, apportionment is allocated on a per-program basis, while obligation authority is generally allo-

cated as a lump sum. Also, unused apportionment carries forward into successive fiscal years, but unused obligation authority does not. Unused apportionment that is carried forward is referred to as an unobligated balance. Although a state’s unobligated balance can be used to increase the federal-aid programmed within a particular funding category in a given year, it cannot be used to increase the total amount of a state’s highway apportionment.

Federal regulations require states to “provide MPO’s with estimates of Federal and State funds which the MPOs shall utilize in developing financial plans.”

FAST Act Programs

Fixing America’s Surface Transportation (FAST) Act became law on December 4, 2015 (Public Law 114-94). It authorized \$305 billion in highway, transit, and other surface transportation programs for federal fiscal years 2016 through 2020. The FAST Act maintains the focus on safety keeps intact the established structure of the various highway programs, continues efforts to streamline project delivery, and provides a dedicated source of federal dollars for freight projects. For the purpose of this document, the core programs are:

The Surface Transportation Block Grant Program

The Surface Transportation Block Grant Program (STBG), formally the Surface Transportation Program, authorizes an average of \$11.7 billion nation-wide each year. It provides flexible funding that may be used by States and localities for projects to preserve and improve the conditions and performance on any Federal-aid highway, bridge and tunnel projects on any public road, pedestrian and bicycle infrastructure, and transit capital projects, including intercity bus terminals.

The Houma-Thibodaux MPO is appropriated by formula approximately \$3.5 million of these funds each year. These are the only funds which the MPO are authorized to directly designate each year.

National Highway Performance Program

The FAST Act continues the National Highway Performance Program, which was established under MAP-21. The NHPP, which is authorized at an annual average of \$23.3 billion, provides support for the condition and performance of the National Highway System (NHS), for the construction of new facilities on the NHS, and to ensure that investments of Federal-aid funds in highway construction are directed to support progress toward the achievement of performance targets established in a State’s asset management plan for the NHS.

Highway Safety Improvement Program

The Highway Safety Improvement Program (HSIP) authorizes an annual average of \$2.3 billion of Federal-aid funding to achieve significant reduction in traffic fatalities and serious injuries on all public roads or publicly owned bicycle and pedestrian pathways or trails. States are required to have a Strategic Highway Safety Plan (SHSP) and certify that they have met any railway-highway crossing and infrastructure safety needs.

Transportation Alternative Program

MAP-21 established, and the FAST Act continued, a new program to provide for a variety of alternative transportation projects, including many that were previously eligible activities under separately funded programs. The TAP replaces the funding from pre-MAP-21 programs including Transportation Enhancements, Recreational Trails, Safe Routes to School, and several other discretionary programs, wrapping them into a single funding source.

National Highway Freight Program

This is a new program established by the *FAST Act*. It authorizes an average of \$1.2 billion nationwide. The purpose of the program is to improve the efficient movement of freight on the National Highway Freight Network (NHFN) and support several goals, including:

- Investing in infrastructure and operational improvements that strengthen economic competitiveness, reduce congestion, reduce the cost of freight transportation, improve reliability, and increase productivity;
- Improving the safety, security, efficiency, and resiliency of freight transportation in rural and urban areas;
- Improving the state of good repair of the NHFN;
- Using innovation and advanced technology to improve NHFN safety, efficiency, and reliability;
- Improving the efficiency and productivity of the NHFN;
- Improving State flexibility to support multi-State corridor planning and address highway freight connectivity; and,
- Reducing the environmental impacts of freight movement on the NHFN.

The Congestion Mitigation and Air Quality Improvement Program

The Congestion Mitigation and Air Quality improvement program (CMAQ) is a funding source for use in meeting the requirements of the Clean Air Act. Eligible activities include transit improvements, transportation demand management, and conversion of public fleets to cleaner fuels. CMAQ funding is available for use in areas that do not meet the National Ambient Air Quality Standards (nonattainment areas) and in former nonattainment areas that are currently in compliance (maintenance areas). Funds are distributed to states based upon a formula that considers population and severity of pollution. A State may transfer up to 50% of its increase in CMAQ funds to other federal transportation programs; however, such funds must still be used in nonattainment and maintenance areas. The *FAST Act* has appropriated an average of \$2.4 billion nationwide each year to this program.

The Houma-Thibodaux MPO area is currently designated as an attainment area and is not eligible for CMAQ funds.

FASTLANE Grants

The “Fostering Advancements in Shipping and Transportation for the Long-term Achievement of National Efficiencies,” or FASTLANE, is a highly competitive program providing dedicated, discretionary funding for projects that address critical freight issues facing the nation’s highways and bridges. The *FAST Act* authorizes an average of \$900 million per year for the program. Eligible projects include the following:

- A highway freight project on the National Highway Freight Network;
- A highway or bridge project on the National Highway System, including:
 - A project to add capacity to the Interstate System to improve mobility; or
 - A project in a national scenic area;
- A freight project that is:
 - A freight intermodal or freight rail project; or
 - A project within the boundaries of a public or private freight rail, water (including ports), or intermodal facility and that is a surface transportation infrastructure project necessary to facilitate direct intermodal interchange, transfer, or access into or out of the facility,
 - Provided that the project will make a significant improvement to freight movements on the National Highway Freight Network, that the Federal share of non-highway portions of the project funds only elements of the project that provide public benefits, and that the total of Federal FASTLANE grants for non-highway portions of these projects does not exceed \$500 million for fiscal years 2016 through 2020; or
- A railway-highway grade crossing or grade separation project.

Public Transportation

Similar to the highway program, the *FAST Act* maintains the nation’s commitment to the primary public transportation programs established in previous transportation acts. The principle programs are:

Section 5307

The Urbanized Area Formula Funding program (49 U.S.C. 5307) makes Federal resources available to urbanized areas and to Governors for transit capital and operating assistance and for transportation related planning in urbanized areas. An urbanized area is an Census-designated area with a population of 50,000 or more as determined by the U.S. Department of Commerce, Bureau of the Census.

Funding is made available to designated recipients, which must be public bodies with the legal authority to receive and dispense Federal funds. Governors, responsible local officials and publicly owned operators of transit services are required to designate a recipient to apply for, receive, and dispense funds for urbanized areas pursuant to 49 U.S.C. 5307(a)(2). The Governor or Governor’s designee is the designated recipient for urbanized areas with

populations between 50,000 and 200,000.

Eligible activities include planning, engineering, design and evaluation of transit projects and other technical transportation-related studies; capital investments in bus and bus-related activities such as replacement of buses, overhaul of buses, rebuilding of buses, crime prevention and security equipment and construction of maintenance and passenger facilities; and capital investments in new and existing fixed guideway systems including rolling stock, overhaul and rebuilding of vehicles, track, signals, communications, and computer hardware and software. All preventive maintenance and some Americans with Disabilities Act complementary paratransit service costs are considered capital costs. For urbanized areas with populations less than 200,000, operating assistance is an eligible expense.

For urbanized areas with 200,000 in population and over, funds are apportioned and flow directly to a designated recipient selected locally to apply for and receive Federal funds. For urbanized areas under 200,000 in population, the funds are apportioned to the Governor of each state for distribution.

Section 5309 Fixed-Guideway Capital Investment Grants

Provides grants for new and expanded rail, bus rapid transit, and ferry systems that reflect local priorities to improve transportation options in key corridors. This program defines a new category of eligible projects, known as core capacity projects, which expand capacity by at least 10% in existing fixed-guideway transit corridors that are already at or above capacity today, or are expected to be at or above capacity within five years. The program also includes provisions for streamlining aspects of the New Starts process to increase efficiency and reduce the time required to meet critical milestones.

Section 5310 Enhanced Mobility of Seniors & Individuals with Disabilities

This program is intended to enhance mobility for seniors and persons with disabilities by providing funds for programs to serve the special needs of transit-dependent populations beyond traditional public transportation services and Americans with Disabilities Act (ADA) complementary paratransit services.

Section 5311

This program provides capital, planning, and operating assistance to states and federally recognized Indian tribes to support public transportation in rural areas with populations less than 50,000, where many residents often rely on public transit to reach their destinations. It also provides funding for state and national training and technical assistance through the Rural Transportation Assistance Program.

Section 5339 Bus and Bus Facilities

Provides capital funding to replace, rehabilitate and purchase buses and related equipment and to construct bus-related facilities including technological changes or innovations to modify low or no emission vehicles or facilities.

Relevant Documents

Assumption Parish Comprehensive Plan

The Assumption Parish Comprehensive Plan was completed in 2009 by the South Central Planning and Development Commission. The plan reviews the strengths, weaknesses, opportunities, and threats to the parish. It also outlines goals, objectives, and strategies for the parish for a 20 year period.

Coordinated Human Services Transportation Plan

Developed by SCPDC in 2007 to facilitate coordinated efforts by representatives of public, private, non-profit transportation and human service providers, and the public. The plan is currently being updated.

Houma ITS Deployment Plan, April 2015

- State Project Number: 4400001465

The plan documents the need for and staged deployment of ITS resources within the MPO Planning area. The document was prepared by Stantec and was completed in April 2015.

Houma-Thibodaux to LA 3127 Connection Draft Environmental Impact Statement

- State Project Number: H.005257

Feasibility study to develop and evaluate alternatives to connect the "Bayou Region" with major hurricane evacuation routes by the construction of a new major controlled access highway from the Gramercy Wallace Bridge and U.S. Hwy. 90. This project is commonly referred to as the "North-South Corridor" project. The document was prepared by Buchart-Horn, Inc. and completed in July 2015.

The Road to 2040: The Metropolitan Transportation Plan for the Houma-Thibodaux Region

The project is a major revision to the master transportation plan for the Houma Urbanized Area. The study assesses the current state of the area's transportation system, estimates future needs and resources, and provides a detailed program for preserving and expanding the system for a 25 year period.

The project includes a computer model (Travel Demand Model) to simulate traffic conditions for the current transportation system and test potential projects to determine a project's future effect upon the system.

The study was adopted by the Houma-Thibodaux MPO Policy committee May 2015.

Lafourche Parish Comprehensive Resiliency Plan

The plan, adopted by the Lafourche Council in April 2014, is designed to guide economic development, transportation, and land use investment in the parish over a 20 year period. The plan also addresses issues pertaining to natural disasters and resiliency.

Lafourche Parish Master Transportation Plan (in development)

This plan is currently being developed by SCPDC. The plan will discuss goals and strategies to assist Lafourche Parish in implementing the MPO's long range plan. The plan is due to be completed by December 2017.

Lafourche Parish Multiuse Path Master Plan and Feasibility Study

Developed by Alta and Duplantis Design Group, this document provides data and casts the vision for a multiuse path along Bayou Lafourche in between Raceland and Lockport.

Louisiana Freight Mobility Plan (Draft)

The plan, developed in consultation with the State's Freight Advisory Council, reviews the various freight needs across the state. While the draft plan was developed to be *MAP-21* compliant, it is currently being revised to comply with new *FAST Act* requirements. The draft plan was completed in October 2015.

Louisiana Statewide Transportation Plan

The plan analyzes the State's infrastructure and the document provides a vast amount of statistics to describe the use and condition of the various modes. The plan presents recommended improvements based upon several revenue scenarios. The latest version was completed in December 2015.

State of Louisiana Strategic Highway Safety Plan, September 2006

Prepared by Cambridge Systematics, Inc. for the Louisiana Department of Transportation and Development. The document outlines the state's vision, goals, and performance measures as dealing with improving the safety on Louisiana state highways.

South Central Regional Transportation Safety Plan, October 2011

Prepared by Cambridge Systematics, Inc. for the Louisiana Department of Transportation and Development. The document outlines the south central's regional vision, goals, and performance measures as dealing with improving the safety on Louisiana state highways. It addresses four areas emphasis: alcohol, seat belts, young drivers, and infrastructure and operations.

South Central Regional Bicycle and Pedestrian Plan

The Bike and Pedestrian Plan was developed by SCPDC in conjunction with the Active Transportation Committee. The plan reviews existing and potential bike and pedestrian projections throughout the region. It also identifies funding sources and includes educational information. The document was completed in April 2013.

Terrebonne Comprehensive Master Plan

The Comprehensive Master Plan Vision 2030 was adopted

by the Houma-Terrebonne Regional Planning Commission in November 2012 and accepted by the Parish Council in February 2013. The master plan update provides a framework for the sustainable growth, development and protection of Terrebonne Parish and the quality of life for its residents.

Town of Lockport Comprehensive Plan

The Town's comprehensive plan was last updated by Gulf South Engineers in 1998. The document serves primarily as a zoning plan, though it touches on capital improvement needs, housing, transportation, and economic issues as well.

Transit Sidewalk Improvement Plan

Prepared for the Good Earth Transit System by South Central Planning & Development Commission, the study documents current infrastructure available for patrons of the Good Earth Transit System which operates throughout the Houma-Thibodaux Urbanized Area. The system evaluates available sidewalks and provides a prioritized list of suggested sidewalk and other pedestrian improvements to increase ease of use and volume of transit service.

Replacement of Houma Tunnel Stage 0 Feasibility Study

- State Project Number: 700-55-0118

Report documenting the need to provide an additional crossing of the Intracoastal Waterway to improve safety conditions and traffic capacity. The document was prepared by Shread-Kurkendall & Associates, Inc. in conjunction with Urban Systems, Inc. and was completed in October 2009.

Progress from Prior TIP

The following are the significant projects from the prior edition of the Houma-Thibodaux Metropolitan Planning Organization Transportation Improvement Program which have been let for construction or completed.

- Airport Connector Road, Right of Way Acquisition
- Country Drive Widening
- Enterprise Drive Roundabout
- Hollywood Road Widening
- LA 20 Widening
- Ledet Street Sidewalk
- Westside Blvd. Extension to LA 311

Improvement Cost Estimates

In order to develop a Transportation Improvement Program consistent with the financial constraints imposed by the projected availability of funding implementation costs were projected for all proposed improvements. Cost estimates for most projects were available from either LADOTD or local public agencies. However, in some instances it is necessary to develop new estimates. These estimates began, when possible, with cost estimates obtained from LADOTD's Office of Planning and Programming in its documents "Highway Program" and "Delivery Schedule." When construction

estimates were not available, the team prepared order-of-magnitude cost estimates in 2013 dollars based on projects in the historic funding database. The typical construction cost estimates for the latter improvements are located in Table 1.

These estimates are for construction costs only. The typical cost calculated for each project could be factored up by as much as 35% to include engineering design, construction management, right-of-way and utilities.

Table 1: Typical Project Cost by Improvement Type (2013 Dollars)

Improvement Type	Avg. Cost	Unit
New Interstate	\$16,000,000	Mile
New 4 Lane Arterial	\$9,000,000	Mile
New 2 Lane Arterial	\$4,000,000	Mile
Arterial Widening	\$5,000,000	Mile
Center Turn Lane	\$2,000,000	Mile
Reconstruction	\$1,250,000	Mile
Overlay	\$500,000	Mile
Sidewalks	\$500,000	Mile
One Way Couplet	\$3,800,000	Mile
ITS	\$700,000	Mile
New Interchange	\$15,000,000	Each
Interchange Improvement	\$7,000,000	Each
Intersection Improvement	\$750,000	Each
Railroad Overpass	\$3,000,000	Each
Bridges		
2 Lane Fixed	\$925,000	Each
4 Lane Fixed	\$2,175,000	Each
2 Lane Swing Span	\$5,200,000	Each
2 Lane Lift Span	\$5,700,000	Each
4 Lane Lift Span	\$25,000,000	Each
4 Lane High Rise	\$27,200,000	Each

Glossary of Terms

Apportionment—Federal-aid funds appropriated to each state over a multi-year period as a result of an act of Congress. Current funding is authorized by the Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users (SAFETEA-LU) which became law on August 10, 2005 (Public Law 109-59).

Average Daily Traffic (ADT): The average number of vehicles passing a given point on a roadway in a 24 hour day.

Clean Air Act Amendments of 1990 (CAAA): Legislation that identifies mobile sources as a major source of pollution and calls for stringent new requirements in metropolitan areas and states where attainment of the NAAQS is contested.

Environmental Assessment (EA): Class III action under the National Environmental Policy Act (NEPA) process. It is a concise public document that provides sufficient evidence for determining whether to prepare an Environmental Impact Statement (EIS) or to determine a Finding of No Significant Impact (FONSI).

Environmental Protection Agency (EPA): Federal agency created in the Environmental Protection Act of 1970 which is responsible for enforcing, monitoring, and maintaining Federal environmental laws.

Federal Aid Urbanized Area: An area which contains at least 50,000 people and has sufficient population density to be classified as urban by the Federal Highway Administration.

Federal Highway Administration (FHWA): An administrative division of the U.S. Department of Transportation responsible for roadway projects throughout the country.

Federal Transit Administration (FTA): Another branch of the U.S. Department of Transportation responsible for mass transportation projects throughout the country.

Intermodal Surface Transportation Efficiency Act of 1991 (ISTEA): A major piece of Federal legislation that implements broad changes in the way transportation decisions are made. ISTEA emphasizes diversity and balance of modes and the preservation of existing systems. It imposes a series of environmental, social and energy factors that must be considered in planning, programming, and selection of projects. ISTEA increased the responsibility of the MPO.

Intelligent Transportation System (ITS): The development or application of technology to improve the efficiency and safety of surface transportation systems.

Louisiana Department of Environmental Quality (LDEQ): State of Louisiana Agency with jurisdiction over environmental regulation.

Louisiana Department of Transportation and Development (LADOTD): State of Louisiana agency with jurisdiction over transportation.

Level of Service: A measure of highway congestion ranging from free flow of traffic to forced flow on a scale of A to F.

Metropolitan Area: An area with a population of at least 50,000 as defined by the Bureau of Census.

Metropolitan Boundaries: The area represented by the existing urbanized area and the contiguous area forecasted to be urbanized in a 20 year horizon for the region. The area may include the entire Metropolitan Statistical Area (MSA) as designated by the Bureau of Census or another area as agreed upon by the governor and the MPO.

Metropolitan Planning Organization (MPO): An organization designated by the Governor under provisions of the 1973 Federal-Aid Highway Act and units of local government which represent 75% of the affected population to carry out the transportation planning process as required in Section 134 of Title 23 of the United States Code as amended by ISTEA and TEA 21. The MPO shares responsibility with the State for developing long and short range transportation plans and programs. The MPO provides a forum for discussion and consensus on issues which transcend jurisdictional boundaries.

National Ambient Air Quality Standards (NAAQS): Federal standards that set allowable concentrations and exposure limits for various pollutants. The standards are developed by the Environmental Protection Agency in response to the requirements of the Clean Air Act and subsequent amendments.

National Environmental Policy Act (1969) (NEPA): Requires environmental impact considerations to be included in project planning along with technical and economic concerns to ensure balanced decision-making occurs in the total public interest.

Nonattainment Area: A geographic region of the United States that has been designated as not complying with the NAAQS by the EPA.

Obligation Authority: Each year during the budget process, Congress sets limits on the amount of Federal Apportionment that can be expended for projects. Usually it is less than amounts apportioned. Obligation Authority covers most of the funding categories established by SAFETEA-LU.

Ozone (O3): A secondary pollutant formed when hydrocarbons and oxides of nitrogen combine in sunlight. The ozone is associated with smog and haze conditions. Although the ozone in the upper atmosphere protects us from harmful ultraviolet sunlight, ground level ozone produces and unhealthy environment in which to live.

Right-of-Way—Land (ROW): usually in public ownership, through which a roadway passes, including the area for shoulders, sidewalks, and other cross section elements.

The Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users (SAFETEA-LU): The most recent transportation act signed by the President on August 10, 2005. SAFETEA-LU provides guaranteed funding for highways, highway safety, and public transportation in the amount of \$244.1 billion.

State Implementation Plan (SIP): A plan showing how the State will meet air quality standards as required by 1977 Clean Air Act Amendments. Included are traffic control measures to reduce emissions from automobiles, a major contributor to carbon monoxide and photochemical oxidant pollution.

Statewide Transportation Improvement Program (STIP): A five year program of highway and transit projects for the state. It is a compilation of projects utilizing various federal and State funding programs, and includes highway projects on the state, city, and county highway systems, as well as projects in the national parks, national forests, and Indian reservations.

Transportation Equity Act for the 21st Century (TEA-21): The transportation act signed June, 1998. TEA-21 primarily continued the methods and procedures of transportation planning as established under ISTEA. TEA-21 enhanced and increased funding for many of ISTEA Federal-Aid funding programs.

Transportation Improvement Program (TIP): A eight year capital improvements program of highway and transit projects including operational and low cost projects to increase efficiency of the existing transportation network as well as capital intensive alternatives prescribed in the Long Range Transportation Plan.

Transportation Plan: A plan of recommended highway and transit facilities improvements to meet the immediate as well as the 20-year planning horizon to determine the transportation needs of the area. The Houma-Thibodaux Metropolitan Area Transportation Plan has both a Short and Long Range element.

United States Department of Transportation (USDOT): Includes FAA, FHWA, and FTA among others.

Vehicle Miles Traveled (VMT): Total motor vehicles miles traveled.
