Traffic Count Stations Studied During Hurricane Gustav

Hurricane Gustav formed on the morning of August 25, 2008 260 miles southeast of Port-au-Prince, Haiti. The storm quickly strengthened from a tropical disturbance to a tropical storm that afternoon. By the early morning hours of August 26, it was strong enough to be categorized as a hurricane by the National Hurricane Center and was predicted to make landfall in Terrebonne Parish by the end of the week.

That afternoon, South Central Planning's traffic counting department made the decision to suspend its regular traffic counting operations and focus on placing out traffic counting devices in locations that would best measure any traffic that may evacuate the region. Traffic counters were placed out on roads determined to be "evacuation routes" such as US 90, LA 20, LA 1 and LA 308. These devices record traffic pneumatically, using rubber road tubes attached to a computer specifically designed time stamp burst of air sent through the tube as vehicles pass over the tube. Counters were set on on Wednesday, Thursday, and Friday of that week and were picked up after the storm was over on the week of September 15th. These counts were unique in that some were also able to recording traffic during the time the South Central Planning region was also being affected by Hurricane Ike.

Our office assumed that most of the data we would get from the study would show large amounts of traffic leaving the region starting on Friday, August 29th, several days of low volumes that would begin to increase after the storm had passed. This was based on the idea that Terrebonne Parish declared a mandatory evacuation of the parish starting on Saturday at 4 p.m. and Lafourche began a recommended evacuation on Friday at 4 p.m. (mandatory evacuations for Lafourche started on Saturday at 3 p.m.) We were also interested to see the which evacuation route was used the heaviest, whether more vehicles would be traveling west towards Lafayette and North Louisiana, east towards New Orleans and then Mississippi, or north towards Baton Rouge.

What we discovered was that, as we assumed, traffic levels spiked from the norm on Friday, August 29th and Saturday, August 30th. Traffic levels were low on Sunday, August 31st, extremely low on Monday, September 1st – the day Gustav made landfall, and continued to remain low, yet got gradually higher each day, during the following week. Traffic volumes spiked again on Friday, September 5th, the day Terrebonne Parish began to allow citizens back into the parish.

The study also showed the majority of vehicles seemed to be heading in a northern direction. On LA 1 and LA 308, just north of Thibodaux, 21,727 vehicles were recorded driving in the direction of LA 70 on Friday and Saturday. In addition to this, there were 25,532 vehicles recorded using LA 20 just south of LA 3127 in Vacherie on Friday and Saturday. In comparison, 29,878 vehicles were recorded as traveling east on US 90 in Des Allemands and 29,594 vehicles were recorded traveling west on US 90 near the Terrebonne/Assumption boundary on Friday and Saturday.

The following page is a spreadsheet showing each count station's location and it's volume for Friday and Saturday. Following this is a series of maps showing where each station was located, and then the individual reports for each station. Unless specified otherwise, each station recorded traffic traveling in both directions.

Hurricane Gustav Evacuation - Vehicles Traveled per Day

Station	Friday, August 29, 2008	Saturday, August 30, 2008	Total
LA 1 NB, north of Thibodaux	5674	6530	12204
